1 List of Modules and Courses

1.1 Overview of the Modules

Module	SWS	\mathbf{CP}
required mod	lules	
Experimental Physics	3 V + 1 Ü	6
Theoretical Physics	$4 \text{ V} + 2 \ddot{\text{U}}$	9
Seminars	4 S	8
Advanced laboratory course	8 P	10
sum		33
Research Ph	ase	
Specialization	\mathbf{F}	15
Methodological Knowledge	\mathbf{F}	15
Master thesis	\mathbf{F}	30
sum		60
Elective Mod	lules	
Topical Courses	$6 \mathrm{V} + 2 \mathrm{\ddot{U}}$	12
Advanced Course	$3 \mathrm{V} + 1 \mathrm{\ddot{U}}$	6
Research Module	4 V	6
to choose		12 - 18
Subsidiary Su	abject	
Subsidiary Subject (cf. chapter 1.	.4)	9-15
to choose		9-15
Total		120

1.2 List of Topical Courses

Only the following courses can be chosen in the "Topical Courses" module:

- Condensed Matter Physics
 - Selected Topics in Condensed Matter Physics
 - Modern Experimental Methods in Condensed Matter Physics
 - Materials Science
 - Introduction to Condensed Matter Theory
 - Selected Chapters of Condensed Matter Theory
 - Theory of Soft Matter I
 - Modern Computational Techniques in Condensed/Soft Matter Physics
 - Computer Simulations in Statistical Physics
- Quantum, Atomic and Neutron Physics
 - Quantum Optics (Q-Ex-1)
 - Photonics (Q-Ex-2)
 - Quantum Information (Q-Ex-3)
 - Precision Fundamental Physics (Q-Ex-4)
- Nuclear and Particle Physics
 - Statistics, Data Analysis and Simulation
 - Particle Detectors
 - Accelerator Physics
 - Particle Physics
 - Astroparticle Physics
 - Cosmology and General Relativity
 - Symmetries in Physics
 - Modern Methods in Theoretical High Energy, Particle and Nuclear Physics
 - Theoretical Particle Physics
 - Introduction to Lattice Gauge Theory
 - Introduction to String Theory
 - Effective Field Theories
 - Theoretical Astroparticle Physics
 - Amplitudes and Precision Physics at the LHC
 - Functional Methods and Exact Renormalization Group

1.3 List of Advanced Courses

Every topical course (cf. 1.2) can also be chosen as an advanced course. In addition the following courses can be chosen:

- Condensed Matter Physics
 - Theory of Soft Matter II
- Nuclear and Particle Physics
 - Advanced Particle Physics
 - Advanced Chapters on Subatomic Physics
 - Advanced Astroparticle- and Astrophysics
 - Advanced Accelerator Physics

1.4 Subsidiary Subjects

Subsidiary Subject	SWS	CP
Chemistry		
Nuclear Chemistry	$2 V + 1 \ddot{U} + 5 P$	9
Nuclear Chemistry (with 1 additional advanced lecture)	$4 \text{ V} + 1 \ddot{\text{U}} + 5 \text{ P}$	12
Nuclear Chemistry (with 2 additional advanced lectures)	$6 V + 1 \ddot{U} + 5 P$	15
Introduction in Theoretical Chemistry	$4 V + 1 \ddot{U} + 5 P$	9
Theoretical Chemistry	$4 V + 2 \ddot{U} + 10P$	12
	1 , 1 2 0 , 101	
Computer Science		0
Computer Science I	$2 V + 2 \ddot{U} + 2 P$	9 19
Computer Science II	4 V + 4 Ü 4 V + 4 Ü + 2 P	12
Computer Science III	4 V + 4 Ü + 2 P 4 V + 4 Ü + 2 S	$\begin{array}{c} 15\\ 16\end{array}$
Computer Science IV	4 v + 4 0 + 2 5	10
E conomics		
International Economics & Public Policy	$6 \text{ V} + \ddot{\text{U}}$	12
Finance & Accounting	6 V+Ü	12
Marketing, Management & Operations	$6 \text{ V} + \ddot{\text{U}}$	12
History of Natural Science		
History of Natural Science I	$4 V + 4 S + 2 \ddot{U}$	15
History of Natural Science II	2 HS + 2 S	9
Mathematics		
Functional Analysis	$4 \text{ V} + 2 \ddot{\text{U}}$	9
Functional Analysis (with Functional Analysis II)	$4 V + 2 \ddot{U}$ $8 V + 2 \ddot{U}$	15
Partial differential equations	4 V + 2 Ü	9
Partial differential equations (with partial differential equations II)	$4 V + 2 \ddot{U}$ $8 V + 2 \ddot{U}$	15
Fundamentals in stochastics	4 V + 2 Ü	9
Fundamentals in stochastics (with stochastics I)	8 V + 2 Ü	15
Basic numerics	$4 \text{ V} + 2 \ddot{\text{U}}$	9
Basic numerics (with numerical methods of ordinary differential equa-	$8 \text{ V} + 2 \ddot{\text{U}}$	15
tions)		
Numerics of differential equations	$4 \mathrm{V} + 2 \mathrm{\ddot{U}}$	9
Numerics of differential equations (with partial differential equations)	$8 \text{ V} + 2 \ddot{\text{U}}$	15
Algebra	$4 \mathrm{V} + 2 \mathrm{\ddot{U}}$	9
Algebra (with "Fields, Rings, Modules")	$8 \mathrm{V} + 2 \mathrm{\ddot{U}}$	15
Topology	$4 \mathrm{V} + 2 \mathrm{\ddot{U}}$	9
Topology (with "Algebraic curves and Riemannian surfaces")	8 V + 2 Ü	15
Computer algebra	$4 \mathrm{V} + 2 \mathrm{\ddot{U}}$	9
Computer algebra (with Number Theory)	8 V + 2 Ü	15
Differential Geometry and Manifolds	$4 \mathrm{V} + 2 \mathrm{\ddot{U}}$	9
Function Theory	$4 \mathrm{V} + 2 \mathrm{\ddot{U}}$	9
Number Theory	$4 \text{ V} + 2 \ddot{\text{U}}$	9
Functional Analysis	$8 \text{ V} + 2 \ddot{\text{U}}$	15
Basics of Numerical Mathematics (with laboratory)	$4 \text{ V} + 2 \ddot{\text{U}} + 2 \text{ P}$	15
Complex Differential Geometry	$8 \text{ V} + 2 \ddot{\text{U}}$	15
In-depth module Analysis	$8 \text{ V} + 2 \ddot{\text{U}}$	15
In-depth module Gauge Theory	$8 \text{ V} + 2 \ddot{\text{U}}$	15

Subsidiary Subject	SWS	CP
Meteorology		
Atmospheric Chemistry and Trace Gas Dynamics	$5 \mathrm{V} + 2 \mathrm{\ddot{U}}$	10
Atmospheric Modelling	$6 \text{ V} + 4 \ddot{\text{U}}$	14
Atmospheric Radiation	$4 \mathrm{V} + 2 \mathrm{\ddot{U}}$	9
Large-scale Atmospheric Dynamics	$4 V + 2 \ddot{U} + 1 P$	11
Fundamentals of Atmospheric Hydrodynamics	$4 \mathrm{V} + 3 \mathrm{\ddot{U}}$	10
Philosophy		
Modern Philosophy	6 S	15
Interdisciplinary Courses		
History of Natural Science I	$3 \mathrm{V}$	3
History of Natural Science II	$3 \mathrm{V}$	3

2 Important Remarks

2.1 General Remarks

- 1. Within the Master of Science in Physics studies, a minimum of 120 credit points (CP) must be obtained. If the number of credit points is exceeded by more than 6 CP, the study advisor has to be contacted to discuss the situation.
- 2. Before completion of the master studies either
 - a) all three experimental physics courses (Ex-5a, Ex-5b, Ex-5c) and 5 main courses in theoretical physics
 - b) or at least two of the three experimental physics courses and 6 main course in theoretical physics

have to be completed successfully. In case only one of the experimental physics courses was part of the bachelor studies a corresponding requirement will be issued at the time of admission to the master studies.

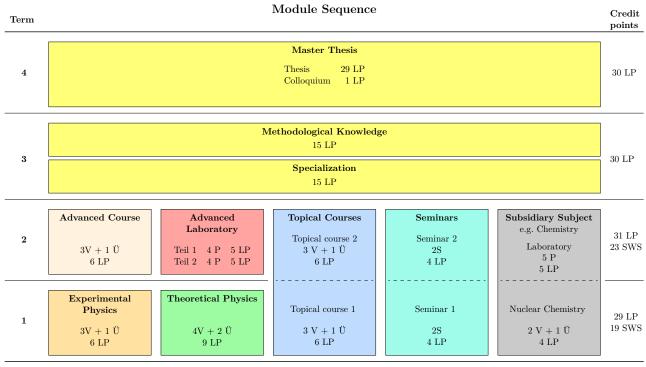

- 3. Within the subsidiary subject at least 9 credit points have to be obtained. On request, subsidiary subjects not listed in this document may be chosen among courses given at the Johannes Gutenberg-Universität Mainz, the TU Darmstadt or the Goethe-Universität Frankfurt. Please consult the chair of the examination committee before submitting such a request. While many subsidiary subjects will only be given in German, it is worth asking the docent to provide the lectures in English if there is a need.
- 4. The 6 credit points from the "Advanced Lectures" module can be replaced with 15 CP instead of 9 CP in the subsidiary subject.
- 5. In case all three experimental physics lectures (Ex-5a, Ex-5b, Ex-5c) were completed successfully before the start of the master studies, an additional advanced course has to be taken.
- 6. Equivalent courses taken at other universities may be recognised with the credit points awarded for the corresponding course in Mainz. Moderate additional requirements may be imposed.
- 7. Upon request, the second course of the "Topical Courses I/II" module may be replaced with a 4 hour main course in theoretical physics.
- 8. Each course in the "Topical Courses I/II" module can be chosen instead of a course in the "Advanced lectures" module but not vice versa. This choice has to be taken at latest at the end of the 3rd enrolment phase through the corresponding enrolment via the "Topical Courses I/II" or the "Advanced Lectures" module.
- 9. The interdisciplinary course is optional. In addition to the courses listed in this document, also courses from the "Studium Generale" and internships ("summer student programmes") at large research laboratories may be accepted. Language courses outside of "Studium Generale" or internships in industry or research institutes can only be recognised after consulting the study advisor.
- 10. The research module is designed for students who wish to take more advanced courses, i.e. from a graduate school. This module may be chosen instead of the "Advanced Lectures" module.

2.2 Remarks Concerning Research Phase

- 1. The research phase of the Master of Science in Physics programme consists of the three modules "Specialization" (3 months, seminar talk without grades, 15 CP), "Methodological Knowledge" (3 months, graded either through a seminar talk or a portfolio of documents representing the work, 15 CP) and "Master's Thesis" (6 months including a colloquium, 30 CP). These three modules are considered as one unit and have to be completed consecutively within one year.
- 2. Students are allowed to enrol into the research phase if at most one of the required courses to reach the 60 CP is missing (e.g. the "Advanced Lectures", one of the two lectures from "Topical Courses I/II" or one of the two seminars). The start of the master thesis is 6 month after the start of the research phase. At this point in time, at least 60 of the required credit points (§6 subparagraph 2) have to be collected.
- 3. As the module "Specialization" is part of the preparation towards the master's thesis, it cannot be taken in parallel to the 6 months long Master's Thesis module.
- 4. A change of the master's thesis advisor can only happen once. This change has to be done before the start of the module "Methodological Knowledge".
- 5. The enrolment into the research phase is processed by the "Studienbüro Physik" with the help of this form. The "Studienbüro" will then take care of the actual enrolment inside Jogustine.
- 6. A master's thesis outside the department of physics, mathematics and computer science (08) has to be requested (please submit an informal request at the Studienbüro). The primary evaluation of an external master's thesis has to be provided by a professor of the department 08.
- 7. The end date of the master's thesis may be extended by at most 4 weeks by the chair of the examination committee. For this to happen, the candidate has to submit a justified written request to the "Studienbüro" which has also to be signed by the corresponding thesis advisor.
- 8. The "Studienbüro" will enter the mark for the module "Methodological Knowledge" into the system at the end of the one-year research phase. The thesis advisors are requested to submit the mark of the module "Methodological Knowledge" when handing in the primary evaluation to the "Studienbüro".
- 9. In case the master's thesis is failed, the module can be repeated once. The new subject of the master thesis has to be sufficiently close to the subjects of the "Specialization" and "Methodological Knowledge" modules.

2.3 Example for Module Sequence

The following table showes an example for the module sequence for students starting in the winter or in the summer term:

 $120 \ LP$

3 Detailed description of the Modules and Courses

3.1 Experimental Physics

3.	Excercises: 20 Qualification and program goals / Competences The aim of this course is to get the students acquainted with advanced methods of quantum mechanics. In this context, the methods of second quantization and relativistic quantum mechanics are discussed, thereby guiding students towards current research topics. During the last third of the course, the lecturers will focus on a selected topic of their choice.				
4.	 Course content Many-particle systems: Many-particle Schrödinger equation, second quantization for bosons and fermions, Fock space, creation and annihilation operators, Hartree-Fock approximation, interaction of non-relativstic matter with the radiation field (e.g. emission and absorption of photons by atoms, scattering of photons on atoms). Relativistic quantum mechanics: Klein-Gordon equation and Dirac equation with associated Lagrange density, interaction with radiation field, applications e.g. hydrogen atom. Additional in-depth topics may vary according to the lecturer. Possible topics are: 				
	 Introduction to the pa advanced group theory representations), quantum optics, examples from many-p 	r (Poincare group,		y, Wigner-Eckart th	eorem, spinor

	 Course content Basic concepts in a statistical description of complex systems at equilibrium and non-equilibrium, linear response and transport, stochastic processes, structure and scattering; 							
	• Modeling concepts, symmetries and conservation laws, coarse-graining concepts (reduction of de- grees of freedom), Newtonian dynamics, Brownian dynamics, hydrodynamics at low Reynolds numbers, simulation methods;							
	• Phase transitions, mean-field approaches, Landau theory, fluctuations and critical exponents, scale invariance and renormalization, and (possibly) basic concepts of statistical field theory;							
	• Concepts of polymer physics such as polymer models, ideal and real chains, scale invariance and 'blob" concept, polymer dynamics (Rouse, Zimm, Reptation), polymer mixtures and Flory Hugg- ins theory, and (possibly) basic concepts of polymer field theory.							
	Other topics are selected thermodynamics, stocha complex soft matter (e. charged systems, entang cations of statistical phy	astic thermodynamic .g., self assembling s gled systems, biomole	s, disordered systems ystems, membranes, ecules, biomaterials),	and glasses, statistic liquid crystals, colle	ical physics o oidal system

2.	Group sizes Lecture: unlimited Excercises: 20						
3.	Qualification and program goals / Competences Students shall be guided towards the essential physics of Material Science that is necessary for an understanding of processes in novel materials on the atomic and the nano-scale. Topics of interest covered by the course are, for example, the structure and properties of functional materials, nanoma- terials, fluids and soft materials, glasses, functionalized surfaces, formation of and transitions within solids, modern methods of material science, as well as concepts and fundamentals of novel materials including their development and application. Dealing with one or more of such topics, the course will develop an enhanced understanding of a research related area of expertise in Condensed Matter Physics. It will further provide a solid basis for conducting a master thesis in Condensed Matter Physics in this or a related area.						
1.	Course content Depending on the lecturer, the course will focus on specific topics like e.g. functional materials, nance materials, soft matter materials, glasses, functionalized sufaces, development strategies, characteri- zation methods, phase transitions or materials for specific applications						
5.	Applicable to the following programs MSc. Physics						
6.	Recommended prerequisites Knowledge of Experimental Physics on the level of the Modul Experimentalphysik "Physik konden sierter Materie"

			3 SWS/31.5 h 1 SWS/10.5 h				
	Group sizes Lecture: unlimited Excercises: 20						
	Qualification and program goals / Competences Building on the introductory courses on quantum mechanics and statistical thermodynamics, the central concepts of the description of crystalline solids shall be discussed. Starting from lattice periodicity and crystal symmetry, concepts like the electronic structure (electrons in a crystal field potential) and elementary excitations (phonons, magnons, plasmons, etc.) and their consequence for the various physical properties of solids at low temperatures are explained, thereby creating a solid basis to deal with research-related topics in the field of condensed matter theory.						
	Course content Crystal structure, symmetry, the concept "reciprocal lattice", lattice dynamics in the harmonic ap- proximation, relation to the elastic constants, electrons in a crystal field (Bloch wave and Wannier functions, energy bands, etc.), basic concepts of magnetism, magnons, etc. Also, depending on the choice of the lecturer, selected advanced topics (e.g., scattering theory of solids, electron-phonon interaction, plasmons and dielectric response, etc.) are presented.						
	Applicable to the following programs MSc. Physics						
	Recommended prerequisites Knowledge at the level of the courses Theoretical Physics 1-5 of the Bachelor's degree program						
	Entry requirements						
3.	Mode and duration of examinations 8.1 Active participation successful completion of the exercises 8.2 Course achievements

2.	Group sizes Lecture: unlimited Excercises: 20							
3.	Qualification and program goals / Competences The course provides an overview of the statistical methods to analyze data and offers an introduction to Monte Carlo techniques. While the methods are often introduced with the help of examples taken from the areas of particle, hadronic and nuclear physics, we recommend the lectures also to students specializing in other fields. The goal of the course is to provide a solid basis that helps to successfully complete a master's thesis in a related area of physics.							
4.	 Course content The following areas shall be covered: Probability distributions and the statistical description of data; error propagations and the estimation of parameters; significance levels and decisions on hypotheses; Monte Carlo methods, as well as 							
	• Statistical analysis methods.							
5.	Applicable to the following program MSc. Physics							
6.	Recommended prerequisites							
7.	Entry requirements

2.	Group sizes Lecture: unlimited Excercises: 20							
3.	Qualification and program goals / Competences The course provides an overview of the detection, read-out and analysis techniques used in partic hadron, nuclear, and astroparticle physics. The goal is to provide a solid basis for the successful con pletion of a master's thesis. Cross disciplinary aspects (solid state physics, electronics, mathematic and computer science) play important roles. Therefore the course is also suitable to students the focus on other areas of physics.							
	Course content The following subjects shall be covered: • Particle sources and accelerators; • Detection methods for charged and neutral radiation:							
	 Detection methods for charged and neutral radiation; Data acquisition;							
	• Particle detectors to measure time, energy, momentum and particle type;							
	• Applications in complex detector systems.

2.	Group sizes Lecture: unlimited Excercises: 20		· · · · ·			
3.	Qualification and program goals / Competences The purpose of the lecture is to provide an understanding of the underlying physical principles of modern particle accelerators and radiation sources. This concerns in particular the layout of pivotal components such as magnetic structures and radiofrequency-systems. Another objective is to teach the mathematical framework with respect to analytical and numerical methods. Such knowledge will form a suitable basis for doing a master's thesis within the accelerator physics groups at Mainz university.					
4.	Course content Linear and non linear beam-dynamics, in conjunction with properties of linear and recirculating accelerators. Building blocks of beam transport systems, e.g. normal und superconducting magnets. Radiofrequency systems for charged particle acceleration, including superconducting systems. Intro- duction to superconductivity. Introduction to radiation physics (Synchrotron-radiation), Collective effects, e.g. free electron laser. Recent developments such as energy recovery linacs.

3.6.2 Computer Science

Remarks:

The introductory courses "Einführung in die Programmierung", "Einführung in die Softwareentwicklung", as well as "Technische Informatik" cannot be chosen as part of these modules.

Courses belonging to the theoretical foundation ("Theoretische Grundlagen der Informatik I + II", "Datenstrukturen u. effiziente Algorithmen") as well as the ones belonging to the focus subjects can be chosen.

The following courses are regularly offered: Computergrafik (Computergrafik Teil I + II, Echtzeitbildverarbeitung, 3D Computer Vision) Informationssysteme (Datenbanken Teil I + II) Datenanalyse (Datenwarehouse + Data-Mining) Modellbildung + Simulation Clientseitige Webanwendungen + Serverseitige Webanwendungen Datenstrukturen u. effiziente Algorithmen Betriebssysteme + verteilte Systeme Kommunikationsnetze Software-Technik.

3.6.3 Economics

Within the subsidiary subject Economics one out of the following three branches can be selected: "International Economics & Public Policy", "Finance & Accounting" and "Marketing, Management & Operations". In each branch two modules must be successfully completed.

- Branch 1: "International Economics & Public Policy"
 - International Trade
 - Mikroökonomie II
 - Öffentliche Finanzen
 - Wirtschaftspolitik
 - Intertemporale Optimierung
 - Mikroökonometrie
 - Exchange Rates
 - Makroökonomie II
 - Zeitreihenanalyse
- Branch 2: "Finance & Accounting"
 - Rechnungslegung
 - Steuern
 - Finanzen
 - Controlling
 - Banken
 - Zeitreihenanalyse
- Branch 3: "Marketing, Management & Operations"
 - Organisation
 - Wirtschaftsinformatik
 - Marketing
 - Logistikmanagement
