# 1 List of Modules and Courses

## 1.1 Overview of the Modules

Module	SWS	$\mathbf{CP}$
required modules		
Experimental Physics	3  V + 1  Ü	6
Theoretical Physics	$4 V + 2 \ddot{U}$	9
Seminars	4 S	8
Advanced laboratory course	8 P	10
sum		33
Research Phase		
Specialization	$\mathbf{F}$	15
Methodological Knowledge	$\mathbf{F}$	15
Master thesis	$\mathbf{F}$	30
sum		60
$Elective\ Modules$		
Topical Courses	$6 \text{ V} + 2 \ddot{\text{U}}$	12
Advanced Course	3  V + 1  Ü	6
Research Module	4 V	6
to choose		12-18
Subsidiary Subject	t	
Subsidiary Subject (cf. chapter 1.4)		9-15
to choose		9-15
Total		120

## 1.2 List of Topical Courses

Only the following courses can be chosen in the "Topical Courses" module:

- Condensed Matter Physics
  - Selected Topics in Condensed Matter Physics
  - Modern Experimental Methods in Condensed Matter Physics
  - Materials Science
  - Introduction to Condensed Matter Theory
  - Selected Chapters of Condensed Matter Theory
  - Theory of Soft Matter I
  - Modern Computational Techniques in Condensed/Soft Matter Physics
  - Computer Simulations in Statistical Physics
- Quantum, Atomic and Neutron Physics
  - Quantum Optics (Q-Ex-1)
  - Photonics (Q-Ex-2)
  - Quantum Information (Q-Ex-3)
  - Precision Fundamental Physics (Q-Ex-4)
- Nuclear and Particle Physics
  - Statistics, Data Analysis and Simulation
  - Particle Detectors
  - Accelerator Physics
  - Particle Physics
  - Astroparticle Physics
  - Cosmology and General Relativity
  - Symmetries in Physics
  - Modern Methods in Theoretical High Energy, Particle and Nuclear Physics
  - Theoretical Particle Physics
  - Introduction to Lattice Gauge Theory
  - Introduction to String Theory
  - Effective Field Theories
  - Theoretical Astroparticle Physics
  - Amplitudes and Precision Physics at the LHC
  - Functional Methods and Exact Renormalization Group

## 1.3 List of Advanced Courses

Every topical course (cf. 1.2) can also be chosen as an advanced course. In addition the following courses can be chosen:

- Condensed Matter Physics
  - Theory of Soft Matter II
- Nuclear and Particle Physics
  - Advanced Particle Physics
  - Advanced Chapters on Subatomic Physics
  - Advanced Astroparticle- and Astrophysics
  - Advanced Accelerator Physics

# 1.4 Subsidiary Subjects

Subsidiary Subject	SWS	CP
Chemistry		
Nuclear Chemistry	$2 V + 1 \ddot{U} + 5 P$	9
Nuclear Chemistry (with 1 additional advanced lecture)	$4 \text{ V} + 1 \ddot{\text{U}} + 5 \text{ P}$	12
Nuclear Chemistry (with 2 additional advanced lectures)	$6 \text{ V} + 1 \ddot{\text{U}} + 5 \text{ P}$	15
Introduction in Theoretical Chemistry	$4 \text{ V} + 1 \ddot{\text{U}} + 5 \text{ P}$	9
Theoretical Chemistry	$4 \text{ V} + 2 \ddot{\text{U}} + 10 \text{P}$	12
$Computer\ Science$		
Computer Science I	$2 V + 2 \ddot{U} + 2 P$	9
Computer Science II	4  V + 4  Ü	12
Computer Science III	$4 \text{ V} + 4 \ddot{\text{U}} + 2 \text{ P}$	15
Computer Science IV	$4 V + 4 \ddot{U} + 2 S$	16
Economics		
International Economics & Public Policy	$6 \text{ V} + \ddot{\text{U}}$	12
Finance & Accounting	$6 \text{ V} + \ddot{\text{U}}$	12
Marketing, Management & Operations	$6 \text{ V} + \ddot{\text{U}}$	12
History of Natural Science		
History of Natural Science I	$4 V + 4 S + 2 \ddot{U}$	15
History of Natural Science II	2 HS + 2 S	9
Mathematics		
Functional Analysis	$4 \text{ V} + 2 \ddot{\text{U}}$	9
Functional Analysis (with Functional Analysis II)	8  V + 2  Ü	15
Partial differential equations	$4 \text{ V} + 2 \ddot{\text{U}}$	9
Partial differential equations (with partial differential equations II)	8  V + 2  Ü	15
Fundamentals in stochastics	4  V + 2  Ü	9
Fundamentals in stochastics (with stochastics I)	8  V + 2  Ü	15
Basic numerics	$4 V + 2 \ddot{U}$	9
Basic numerics (with numerical methods of ordinary differential equations)	$8 V + 2 \ddot{U}$	15
Numerics of differential equations	$4 \text{ V} + 2 \ddot{\text{U}}$	9
Numerics of differential equations (with partial differential equations)	$8 \text{ V} + 2 \ddot{\text{U}}$	15
Algebra	$4 \text{ V} + 2 \ddot{\text{U}}$	9
Algebra (with "Fields, Rings, Modules")	$8 \text{ V} + 2 \ddot{\text{U}}$	15
Topology	4  V + 2  Ü	9
Topology (with "Algebraic curves and Riemannian surfaces")	8  V + 2  Ü	15
Computer algebra	$4 \text{ V} + 2 \ddot{\text{U}}$	9
Computer algebra (with Number Theory)	8  V + 2  Ü	15
Differential Geometry and Manifolds	$4 V + 2 \ddot{U}$	9
Function Theory	$4 V + 2 \ddot{U}$	9
Number Theory	$4 V + 2 \ddot{U}$	9
Functional Analysis	$8 V + 2 \ddot{U}$	15
Basics of Numerical Mathematics (with laboratory)	$4 V + 2 \ddot{U} + 2 P$	15
Complex Differential Geometry	8  V + 2  Ü	15
In-depth module Analysis	8  V + 2  Ü	15
In-depth module Gauge Theory	$8 V + 2 \ddot{U}$	15

Subsidiary Subject	SWS	CP
Meteorology		
Atmospheric Chemistry and Trace Gas Dynamics	5  V + 2  Ü	10
Atmospheric Modelling	6  V + 4  Ü	14
Atmospheric Radiation	$4 \mathrm{~V} + 2 \mathrm{~\ddot{U}}$	9
Large-scale Atmospheric Dynamics	$4 \text{ V} + 2 \ddot{\text{U}} + 1 \text{ P}$	11
Fundamentals of Atmospheric Hydrodynamics	$4~\mathrm{V}+3~\ddot{\mathrm{U}}$	10
Philosophy		
Modern Philosophy	6 S	15
Interdisciplinary Courses		
History of Natural Science I	3 V	3
History of Natural Science II	3 V	3

### 1.4.1 Further Subsidiary Subjects

It is also possible to choose "Physics" as subsidiary subject which allows for advanced courses as well as additional theoretical or experimental physics courses.

Upon request additional subsidiary subjects can be added from other faculties of the university. Those need to be approved by the corresponding committee ("Fachausschusses für Studium und Lehre Physik") and a dedicated contract has to be established with the faculty. The proposed subsidiary subject should be related to either natural sciences or mathematics. It is therefore advised to consult the head of the exams committee before filing such a request.

## 2 Important Remarks

#### 2.1 General Remarks

- 1. The language of all physics courses is English unless all participants are proficient in German and there is a consent to hold the course in German.
- 2. Within the Master of Science in Physics studies, a minimum of 120 credit points (CP) must be obtained. If the number of credit points is exceeded by more than 6 CP, the study advisor has to be contacted to discuss the situation.
- 3. Before completion of the master studies either
  - a) all three experimental physics courses (Ex-5a, Ex-5b, Ex-5c) and 5 main courses in theoretical physics
  - b) or at least two of the three experimental physics courses and 6 main course in theoretical physics

have to be completed successfully. In case only one of the experimental physics courses was part of the bachelor studies a corresponding requirement will be issued at the time of admission to the master studies.

- 4. Within the subsidiary subject at least 9 credit points have to be obtained. On request, subsidiary subjects not listed in this document may be chosen among courses given at the Johannes Gutenberg-Universität Mainz, the TU Darmstadt or the Goethe-Universität Frankfurt. Please consult the chair of the examination committee before submitting such a request. While many subsidiary subjects will only be given in German, it is worth asking the docent to provide the lectures in English if there is a need.
- 5. The 6 credit points from the "Advanced Lectures" module can be replaced with 15 CP instead of 9 CP in the subsidiary subject.
- 6. In case all three experimental physics lectures (Ex-5a, Ex-5b, Ex-5c) were completed successfully before the start of the master studies, an additional advanced course has to be taken.
- 7. Equivalent courses taken at other universities may be recognised with the credit points awarded for the corresponding course in Mainz. Moderate additional requirements may be imposed.
- 8. Upon request, the second course of the "Topical Courses I/II" module may be replaced with a 4 hour main course in theoretical physics.
- 9. Each course in the "Topical Courses I/II" module can be chosen instead of a course in the "Advanced lectures" module but not vice versa. This choice has to be taken at latest at the end of the 3rd enrolment phase through the corresponding enrolment via the "Topical Courses I/II" or the "Advanced Lectures" module.
- 10. The interdisciplinary course (3 CP) is optional. In addition to the courses listed in this document, also courses from the "Studium Generale" and internships ("summer student programmes") at large research laboratories may be accepted. Language courses outside of "Studium Generale" or internships in industry or research institutes can only be recognised after consulting the study

advisor. The credit points are added to the points for the subsidiary subject and in total a maximum of 15 credit points can be obtained.

- 11. The research module is designed for students who wish to take more advanced courses, i.e. from a graduate school. This module may be chosen instead of the "Advanced Lectures" module.
- 12. Courses with only two hours per week cannot be credited towards the degree. They can be listed in the transcript of records under the category "other achievements" in case there is a course assessment.

## 2.2 Rules and regulations

The academic rules and regulations of the MSc program in physics at the Johannes Gutenberg University Mainz are summarized in the so-called "Prüfungsordnung" – or in short – "PO" (see https://www.studium.fb08.uni-mainz.de/downloadcenter-physik/). As a legal document, it needs to be formulated in German. However, we are summarizing some important points (and pit-falls) below in English.

#### 2.2.1 Introductory remarks

- If you have questions, you should first contact the student advisor ("Studienberater") or the manager of studies ("Studienmanager") via our contact form http://helpdesk.fb08.uni-mainz.de/?l=1. The office of student affairs ("Studienbüro", Staudingerweg 7, room 05 430, 10-12 pm Mondays to Thursday) is responsible for transcripts and certification documents, maintains recognized achievements in Jogustine and accepts applications to the Examination Board.
- A module may comprise several courses, such as teaching classes, exercises and labs. In the MSc program, a module typically consists of lecture sessions and exercise classes.
- All modules in the MSc program are graded based either on written exams, oral exams, presentations, reports on projects, or laboratory work.
- German grades are on a scale of 1.0 (best possible grade) to 4.0 (lowest passing grade). 5.0 is a failing grade. A popular formula to translate your grade into that of the German system is the so-called modified Bavarian formula

$$\frac{N_{max} - N}{N_{max} - N_{min}} \cdot 3 + 1.$$

Where  $N_{max}$  is the highest possible grade in your home country's grading system,  $N_{min}$  is lowest possible passing grade in your home country's grading system and N the grade you want to convert.

#### 2.2.2 How to register for a class and an exam?

At the JGU, we offer – with a few exceptions – a two-step registration process.

- At the end of the preceding term, in the week before the term starts and during the first week of lectures, students register their classes via Jogustine https://www.info.jogustine.uni-mainz.de/anmeldephasen/lehrveranstaltungsanmeldephasen/. You may drop out of a class without problems.
- Around mid-term, however, Jogustine will allow you for two weeks to register for the exam if you opt for this. The registration periods can be found here: https://www.info.jogustine.

uni-mainz.de/anmeldephasen/pruefungsanmeldephasen/. Such a registration is binding! Note that our department allows you retract from your registration, as long as you do it 1 week (1pm) before the exam is scheduled.

• After expiry of the registration or de-registration deadlines, a withdrawal is only possible in justified individual cases. This applies, for example, if you have been sick and this fact is proven by a medical certificate.

#### 2.2.3 What happens if you fail an exam and have to repeat?

- Failed *compulsory* and *elective* module examinations may be repeated at most twice. An oral supplementary examination may, however, be approved by the examination committee following a written application to the examination board. A grade of 4.0 will be given in case the supplementary exam has been passed.
- It is not allowed to repeat an exam that was passed before.
- Students who have not passed a compulsory elective module examination may switch to a different elective module after having failed one, twice or three times. For the new elective module, the student receives three more attempts to successfully complete the exam.
- The registration for the first repetition of a module examination or partial module examination should take place within six months after the failure and the second repetition of the exam should take place within twelve months of the failure of the first repetition; the registration.
- The registrations are performed automatically by the examination office, unless the exam has been passed in the mean-time.
- Only in justified cases, longer deadlines may be granted for the first and a second repetition. However, the time period may not exceed one year and nine months. If the deadlines to repeat the examinations have been missed, the exams are considered failed.
- If an examination can no longer be repeated, the Master's program is considered failed and the continuation of studies in the same master's program is no longer possible in a German University.

#### 2.2.4 What happens if you fail to participate in an exam or withdraw from the exam?

- If the candidate does not appear to a duly established and notified appointment without good reasons or he or she steps back from the exam without valid reasons, the grade is rated as "not sufficient" (5,0).
- Exams are also considered failed if the candidate did not complete the exam or file a written report (e.g. the Master's thesis) within the prescribed time limits.
- If you disagree with the decision, the reasons for the failure or withdrawal need to be promptly notified in writing to the examination board and made credible. Should the Examining Board recognize the reasons, the exam will be re-scheduled.
- If the candidates fails to appear or withdraws from the exam because of illness, this must be proven by a medical certificate at the latest by the third day after the exam date.

## 2.3 Recognition of achievements

Achievements obtained in other study programs in Mainz or abroad can be recognized if there is no significant difference with respect to corresponding achievements within the MSc in physics in Mainz. Within the recognition achievements can be combined or split in order to match the formal criteria on e.g. needed credict points. Each case will be looked at individually and discussed with the applicant. The corresponding recognition form to be filled out can be found here:

http://www.studium.fb08.uni-mainz.de/downloadcenter-physik/

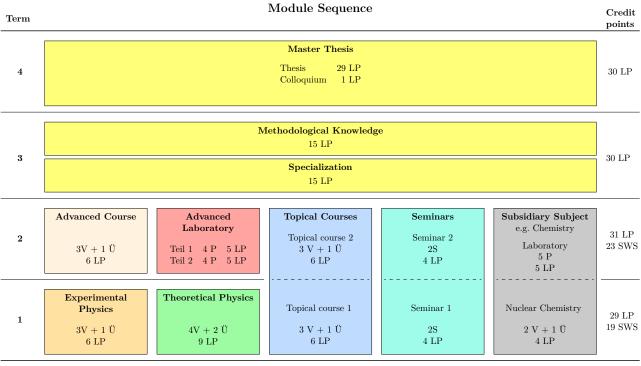

## 2.4 Remarks Concerning Research Phase

- 1. The research phase of the Master of Science in Physics programme consists of the three modules "Specialization" (3 months, seminar talk without grades, 15 CP), "Methodological Knowledge" (3 months, graded either through a seminar talk or a portfolio of documents representing the work, 15 CP) and "Master's Thesis" (6 months including a colloquium, 30 CP). These three modules are considered as one unit and have to be completed consecutively within one year.
- 2. Students are allowed to enrol into the research phase if at most one of the required courses to reach the 60 CP is missing (e.g. the "Advanced Lectures", one of the two lectures from "Topical Courses I/II" or one of the two seminars). The start of the master thesis is 6 month after the start of the research phase. At this point in time, at least 60 of the required credit points (§6 subparagraph 2) have to be collected.
- 3. As the module "Specialization" is part of the preparation towards the master's thesis, it cannot be taken in parallel to the 6 months long Master's Thesis module.
- 4. A change of the master's thesis advisor can only happen once. This change has to be done before the start of the module "Methodological Knowledge".
- 5. The enrolment into the research phase is processed by the "Studienbüro Physik" with the help of this form<sup>1</sup>. The "Studienbüro" will then take care of the actual enrolment inside Jogustine.
- 6. A master's thesis outside the department of physics, mathematics and computer science (08) has to be requested (please submit an informal request at the Studienbüro). The primary evaluation of an external master's thesis has to be provided by a professor of the department 08.
- 7. The end date of the master's thesis may be extended by at most 4 weeks by the chair of the examination committee. For this to happen, the candidate has to submit a justified written request to the "Studienbüro" which has also to be signed by the corresponding thesis advisor.
- 8. The "Studienbüro" will enter the mark for the module "Methodological Knowledge" into the system at the end of the one-year research phase. The thesis advisors are requested to submit the mark of the module "Methodological Knowledge" when handing in the primary evaluation to the "Studienbüro".
- 9. In case the master's thesis is failed, the module can be repeated once. The new subject of the master thesis has to be sufficiently close to the subjects of the "Specialization" and "Methodological Knowledge" modules.

## 2.5 Example for Module Sequence

The following table showes an example for the module sequence for students starting in the winter or in the summer term:

 $120 \mathrm{\,LP}$ 

# 3 Detailed description of the Modules and Courses

# 3.1 Experimental Physics

At	Atomic and Quantum Physics						
(JOC	ID number						
1.	1. Courses/Teaching methods Lecture with excercises "Atomic and Quantum Physics" (WP) Lecture (WP) Excercises (WP)		3 SWS/31.5 h 1 SWS/10.5 h	Self-study 138 h	Credit Points 6 LP		
2.	Group sizes Lecture: unlimited Excercises: 20						
3.	<ul> <li>Qualification and program goals / Competences</li> <li>Students should</li> <li>acquire a basic knowledge on the physics of atoms, molecules and quanta,</li> <li>understand the structure of atoms and simple molecules as well as their interactions with quanta,</li> <li>apply quantum mechanical approaches to practical examples and thus deepen their understanding, achieve insights into modern experimental techniques in atomic physics, spectroscopy and the manipulation of quantum systems by coherent radiation</li> </ul>						
4.	Course content Profound introduction to the experimental quantum physics of atoms and molecules and their interaction with light. The strong experiment-theory interlink in this field is detailed and can be supported by the embedding of guest lectures. The lectures cover the following set of topics:  • relativistic effects and Dirac equation for the hydrogen atom, influences of the atomic nucleus, atoms in external fields						
	• atoms in laser fields – lig		,		•		
	<ul> <li>many electron systems, fundamentals of laser spectroscopy on atoms and molecules;</li> <li>manipulation and trapping of neutral atoms, molecules and ions, Ramsey method, atomic clocks,</li> <li>as well as Bose Einstein condensation</li> </ul>						
5.	Applicable to the following program BSc. Physics, MSc. Physics	ns	cs				
6.	Recommended prerequisites

Relativis sics and aimed at hadron p	Qualification and program goals / Competences Relativistic quantum field theory constitutes the foundation of the Standard Model of particle physics and is essential for an understanding of modern particle and hadron physics. This lecture is aimed at theoretical interested students who would like to make a start in the field of particle and hadron physics. The lecture provides the basic tools of relativistic quantum field theory. Subsequent specialized lectures may build on these basic tools.						
Path int interaction	Course content Path integrals, Grassmann numbers, quantization of the Klein-Gordon field, Dirac, Maxwell and interacting fields, Wick's theorem, Feynman rules, cross sections, S-matrix, LSZ-reduction formula, basics and outlook of non-abelian gauge theories and spontaneous symmetry breaking.

#### **Advanced Statistical Physics** ID number Workload Course Duration Credit Points Designated term (JOGU-StINe) (workload) (laut Studienverlaufsplan) (laut Studienverlaufsplan) (LP) 9 LP 08.128.170 270 h 1 1 Courses/Teaching methods Credit Points Contact time Self-study Lecture with excercises "Advanced Statistical 9 LP 207 hPhysics" (WP) Lecture (WP) 4 SWS/42 h 2 SWS/21 h Excercises (WP) 2. Group sizes Lecture: unlimited Excercises: 20 Qualification and program goals / Competences Students will get to know advanced concepts and applications of statistical physics. They will learn central concepts on how to describe systems and materials whose behavior is dominated by large fluctuations, such as liquids in general, many plastics, most biomaterials, but also systems beyond the scope of natural sciences (e.g. in finance). The focus lies on general overarching principles, such as symmetries, cooperative processes and phase transitions, scales and scale free behavior, as well as coarse-graining. Specific examples will be selected based on the current research topics in Mainz and will to a large extent be related to soft matter. Course content • Basic concepts in a statistical description of complex systems at equilibrium and non-equilibrium, linear response and transport, stochastic processes, structure and scattering; • Modeling concepts, symmetries and conservation laws, coarse-graining concepts (reduction of degrees of freedom), Newtonian dynamics, Brownian dynamics, hydrodynamics at low Reynolds numbers, simulation methods; • Phase transitions, mean-field approaches, Landau theory, fluctuations and critical exponents, scale invariance and renormalization, and (possibly) basic concepts of statistical field theory; Concepts of polymer physics such as polymer models, ideal and real chains, scale invariance and "blob" concept, polymer dynamics (Rouse, Zimm, Reptation), polymer mixtures and Flory Huggins theory, and (possibly) basic concepts of polymer field theory. Other topics are selected based on the preferences of the lecturers. Possibilities are: Non-equilibrium thermodynamics, stochastic thermodynamics, disordered systems and glasses, statistical physics of complex soft matter (e.g., self assembling systems, membranes, liquid crystals, colloidal systems, charged systems, entangled systems, biomolecules, biomaterials), as well as interdisciplinary applications of statistical physics, e.g., in finance. 5. -	Course content  The course offers a profound theoretical introduction to the overlapping fields of theoretical many particle physics, quantum optics and solid state quantum theory. It also offers an introduction to quantum information, ultracold gases and photonics. The strong theory-experiment interlink I this research area is supported by the possible embedding of focused experimental guest lectures into the course.  Selection of topics:  Introduction: 1-particle and many-body Schrödinger equation, spin and its physical consequences, fermions and bosons, Green functions						
• Quantum many-body theory: creation and annihilation operators, observables, quantum field ry, applications (interacting Fermi gas, interacting Bose gas, ultra-cold quantum gases, 4He herent states, path integrals							
	• Quantum theory of the electromagnetic field: classical Maxwell field, Lagrange and Hamiltonians, quantization of the electromagnetic field, interaction of the electromagnetic field we matter, Casimir effect, Rayleigh and Thomson scattering, Raman effect						
	• Quantum optics: photon states, atoms in cavities,	, <u>-</u>	Ο,	, -	· ,		
	• Methods and models of quoperator identities and badistributions, dissipative	asis states, quantu	m statistics, characte	eristic functions, qua	si-probabilit

2.	Group sizes typical 2 student working o	n the same labor	ratory experiment				
3.	Qualification and program goals / Competences The students are supposed to deepen advanced work in experimental and numerical-theoretical fields of physics. This is practiced by carrying out challenging experiments in two-person teams, extending over several days under supervision of experienced assistants. Usually complex data acquisition systems and computer-based analysis methods are used. Compared to the bachelor advanced laboratory course here is more emphasis on independent work.						
	Course content In both parts 1 and 2, experiments will be performed summing up to a total of 10 laboratory days.  Part 1: 2-3 advanced two-day experiments from the fields: atomic physics, quantum optics, nuclear physics, elementary particle physics, solid state physics, detectors and particle detection,						
	and atmospheric physics.  Part 2: the remaining time may be filled with existing experiments or with extended projects in an experimental or theoretical work group.

## 3.4.2 Condensed Matter Physics

Mo	Module Topical Courses: "Selected topics in Condensed Matter Physics"							
(JOC	ID number Workload (workload) 08.128.720 180 h		Course Duration (laut Studienverlaufsplan) 1	Designated term (laut Studienverlaufsplan)	Credit Points (LP) 6 LP			
1.	Courses/Teaching methods Lecture with excercises "Selected topics in Condensed Matter Physics" (WP) Lecture (WP)		Contact time  3 SWS/31.5 h 1 SWS/10.5 h	Self-study 138 h	Credit Points 6 LP			
2.	Excercises (WP)  Group sizes  Lecture: unlimited  Excercises: 20							
3.	Qualification and program goals / Competences Students shall be guided towards a selection of special problems in modern Condensed Matter Physics to obtain a solid background when dealing with research related topics. Magnetism and super conductivity emerge through the correlated dynamics of electrons in solids and provide the basis of modern electronics and information technology. Surface Science is essential for an in depth understanding of miniaturized devices as well as for novel diagnostic techniques. Soft Matter shows fascinating structural and dynamic properties and nurtures a rapidly developing field of applications. Its fundamental scientific questions also related to other disciplines like biology, chemistry and medicine. By an depth treatment of one or more of these topics, the course will provide a solid basis for conducting a master thesis in the area of Condensed Matter Physics.							
4.	Course content Depending on the lecturer, the course will focus on specific topics, such as magnetism, super conductivity, heavy fermions, applied solid state physics, surface science or soft matter physics							
5.	Applicable to the following programs MSc. Physics							
6.	Recommended prerequisites  Knowledge of experimental physics on the level of the module Experimental Physics "Physics of Condensed Matter"							
7.	Entry requirements							
8.	Mode and duration of examinations  8.1 Active participation successful completion of the exercises  8.2 Course achievements

4.	Course content Concerning to the lecturer the focus is put on a current scientifical topic from the following research areas: electroweak and strong interactions, lattice gauge theory, effective field theories, mathematical aspects of perturbation theory, functional integration in quantum mechanics und quantum field theory, concepts of model building beyond the standard model (e.g. supersymmetry, string theory) and others. Lectures of this module are offered by different lecturers and topics can change every semester. In this case a student can subscribe to this module more than once and the module will not be counted as identical.

08.128.735   180 h   1   1   1   6 LP								
Lecture with excercises "Accelerator Physics" (WP) Lecture (WP) Lecture (WP) Lecture (WP) Excercises (WP)  2 Group sizes Lecture: unlimited Excercises: 20  3 Qualification and program goals / Competences The purpose of the lecture is to provide an understanding of the underlying physical principles of modern particle accelerators and radiation sources. This concerns in particular the layout of pivotal components such as magnetic structures and radiofrequency-systems. Another objective is to teach the mathematical framework with respect to analytical and numerical methods. Such knowledge will form a suitable basis for doing a master's thesis within the accelerator physics groups at Mainz university.  4. Course content Linear and non linear beam-dynamics, in conjunction with properties of linear and recirculating accelerators. Building blocks of beam transport systems, e.g. normal und superconducting magnets. Radiofrequency systems for charged particle acceleration, including superconducting magnets. Radiofrequency systems for charged particle acceleration, including superconducting magnets.  Applicable to the following programs MSc. Physics  5. Applicable to the following programs MSc. Physics  6. Recommended prerequisites  7. Entry requirements  8. Mode and duration of examinations 8.1 Active participation 8.2 Course achievements 8.3 Module czamination Common oral examination (30 – 45 Min.) covering two topical courses  9. Weighting of the achievement in the overall grade 6/120  10. Module frequency Every winter semester  11. Persons responsible for this module and full-time lecturers Responsible: Prof. Dr. K. 3.	Qualification and program goals The course provides an exthemes. It provides essent area.	overview of cosmolo		= -	=		
4.	Course content  The main themes of the coordinate of the coordinat		se				
	• Cosmic radiation of charged particles, neutrinos, and gammas as well as gravitational waves. The subject "cosmology and evolution of the universe" covers cosmological models and parameters cosmological distances and related measurements, the matter/antimatter problem, the synthesis of light elements, the microwave background radiation, structure formation, the formation, classification, development of galaxies, active galactic nuclei and galaxy clusters, as well as the formation energy budget, development, and final stages of stars, including the related nucleosynthesis. The theme "dark matter"covers the evidence, as well as direct and indirect searches performed to detect viable particle candidates. Keywords important for the chapter on "cosmic rays" are: sources, composition, propagation, and detection of charged cosmic radiation, sources and detection of resolved and diffuse gamma-ray sources, determination of neutrino properties (oscillations, direct mass measurement, neutrino-less double beta decay), sources and detection of terrestrial and astrophysical neutrinos, the theory and prospective sources of gravitational waves, as well as their indirect and direct detection.

2.	Group sizes Lecture: unlimited Excercises: 20						
3.	Qualification and program goals / Competences  The lectures' program goal is to provide a basic understanding of the methods of lattice gauge theory and its applications to problems in particle and nuclear physics. A particular goal is to teach the methods which are required for pursuing a master's thesis in this field.						
4.	Course content Discretization of PDEs by finite differences; path integral in quantum mechanics; Euclidean correlation functions in QFT; transfer matrix; scalar field theories on the lattice and spin models; Ising model at high and low temperature; $Z_2$ lattice gauge theory, Elitzur's theorem and Wegner loop; QED and QCD in the continuum; Wilson loop; lattice gauge theory with Wilson action; Haar measure; fermions on the lattice; static potential and strong-coupling expansion; renormalization group and continuum limit; lattice perturbation theory; Monte Carlo simulations and determination of hadronic properties.

### 3.6.2 Computer Science

#### Remarks:

The introductory courses "Einführung in die Programmierung", "Einführung in die Softwareentwicklung", as well as "Technische Informatik" cannot be chosen as part of these modules.

Courses belonging to the theoretical foundation ("Theoretische Grundlagen der Informatik I + II", "Datenstrukturen u. effiziente Algorithmen") as well as the ones belonging to the focus subjects can be chosen.

The following courses are regularly offered: Computergrafik (Computergrafik Teil I + II, Echtzeitbildverarbeitung, 3D Computer Vision) Informationssysteme (Datenbanken Teil I + II) Datenanalyse (Datenwarehouse + Data-Mining) Modellbildung + Simulation Clientseitige Webanwendungen + Serverseitige Webanwendungen Datenstrukturen u. effiziente Algorithmen Betriebssysteme + verteilte Systeme Kommunikationsnetze Software-Technik.

### 3.6.3 Economics

Within the subsidiary subject Economics one out of the following three branches can be selected: "International Economics & Public Policy", "Finance & Accounting" and "Marketing, Management & Operations". In each branch two modules must be successfully completed.

- Branch 1: "International Economics & Public Policy"
  - International Trade
  - Mikroökonomie II
  - Öffentliche Finanzen
  - Wirtschaftspolitik
  - Intertemporale Optimierung
  - Mikroökonometrie
  - Exchange Rates
  - Makroökonomie II
  - Zeitreihenanalyse
- Branch 2: "Finance & Accounting"
  - Rechnungslegung
  - Steuern
  - Finanzen
  - Controlling
  - Banken
  - Zeitreihenanalyse
- Branch 3: "Marketing, Management & Operations"
  - Organisation
  - Wirtschaftsinformatik
  - Marketing
  - Logistikmanagement
